EDUCATION

The LNM Institute of Information Technology — **Jaipur, India**
Bachelor of Technology in Electronics and Communication Engineering, CGPA: 8.16 — *Aug 2023 – May 2027*

Delhi Public School — **Ujjain, India**
Class XII (CBSE), Percentage: 87.6% — *May 2023*

Delhi Public School — **Ujjain, India**
Class X (CBSE), Percentage: 93.4% — *May 2021*

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL
Libraries: PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy
Analysis: Seaborn, Matplotlib, Tableau
Machine Learning: Natural Language Processing, Transformers, Retrieval Augmented Generation
Deployment: Git, GitHub, Docker, CI/CD Pipelines, FastAPI, Flask, AWS Cloud
Coursework: Linear Algebra, Probability and Statistics, Artificial Intelligence and Machine Learning

PROJECTS

Guru Setu: AI Teacher Support System — **GitHub**
Generative AI, RAG Model, Whisper, Google OAuth, Gemini — *October 2025*

- Developed an AI-powered teacher support system integrating Generative AI and RAG to generate questions, summaries, schedules, and voice-based assistance for educators.
- Identified key educator bottlenecks through user research and planned targeted automation workflows, successfully resolving 80% of reported administrative challenges.
- Implemented a voice-enabled interface and deployed the application for live usage, demonstrating end-to-end functionality across text, speech, and retrieval-based AI modules.

Self Resolving Customer Chat Support System — **GitHub**
Transformers - BERT, GPT, Data Pipelines, FastAPI — *January 2026*

- Designed a self-resolving customer chat support system using BERT for intent classification and GPT for contextual response generation to automate issue resolution and enforce escalation to a human agent.
- Implemented ETL pipelines to ingest, clean, and structure historical customer support data, enabling efficient retrieval and continuous learning from past interactions achieving approximately 80% classification accuracy.
- Developed a FastAPI-based backend to serve real-time chat responses, feedback logging, and systematized model updates for improved support accuracy over time.

E-Commerce Competitor Price and Stock Recommendation — **GitHub**
Web Scraping, ETL Pipelines, XGBoost, Docker, CI/CD Pipelines — *December 2025*

- Built a systematized competitor price monitoring system that runs daily to fetch, clean, and process current pricing and stock data across e-commerce platforms using web scraping.
- Executed an XGBoost-based pricing and stock recommendation model achieving 82% accuracy, with computerized daily retraining to predict next-day customer demand based on market trends.
- Enhanced a Streamlit-based frontend for interactive usage and deployed the system using Docker with CI/CD pipelines, reducing deployment time by 60%.

CERTIFICATION

Deloitte Australia Data Analytics Job Simulation on Forage — **January 2026**
Data Analysis, Data Modeling, Data Visualization Tools, Spreadsheet Skills

- Completed a Deloitte job simulation involving data analysis and forensic technology.
- Created an interactive data dashboard using Tableau.
- Used Tableau to classify data and derive business insights.

ACHIEVEMENTS

- Team Leader and Hackathon Finalist at NIT Delhi for the Guru Setu project, selected among top 65 teams for technical innovation and problem solving.
- Branch Topper in Electronics and Communication Engineering for academic excellence.
